Hint: This report compares answers on the 2017 and 2021 American Beliefs Study surveys and shows changing trends on these social and moral belief statements, if any. The chart displays the distance between the 2017 and 2021 statements. The longer the bar, either positive or negative, the greater the shift in agreement.

Trends in Social and Moral Beliefs Between 2017 & 2021

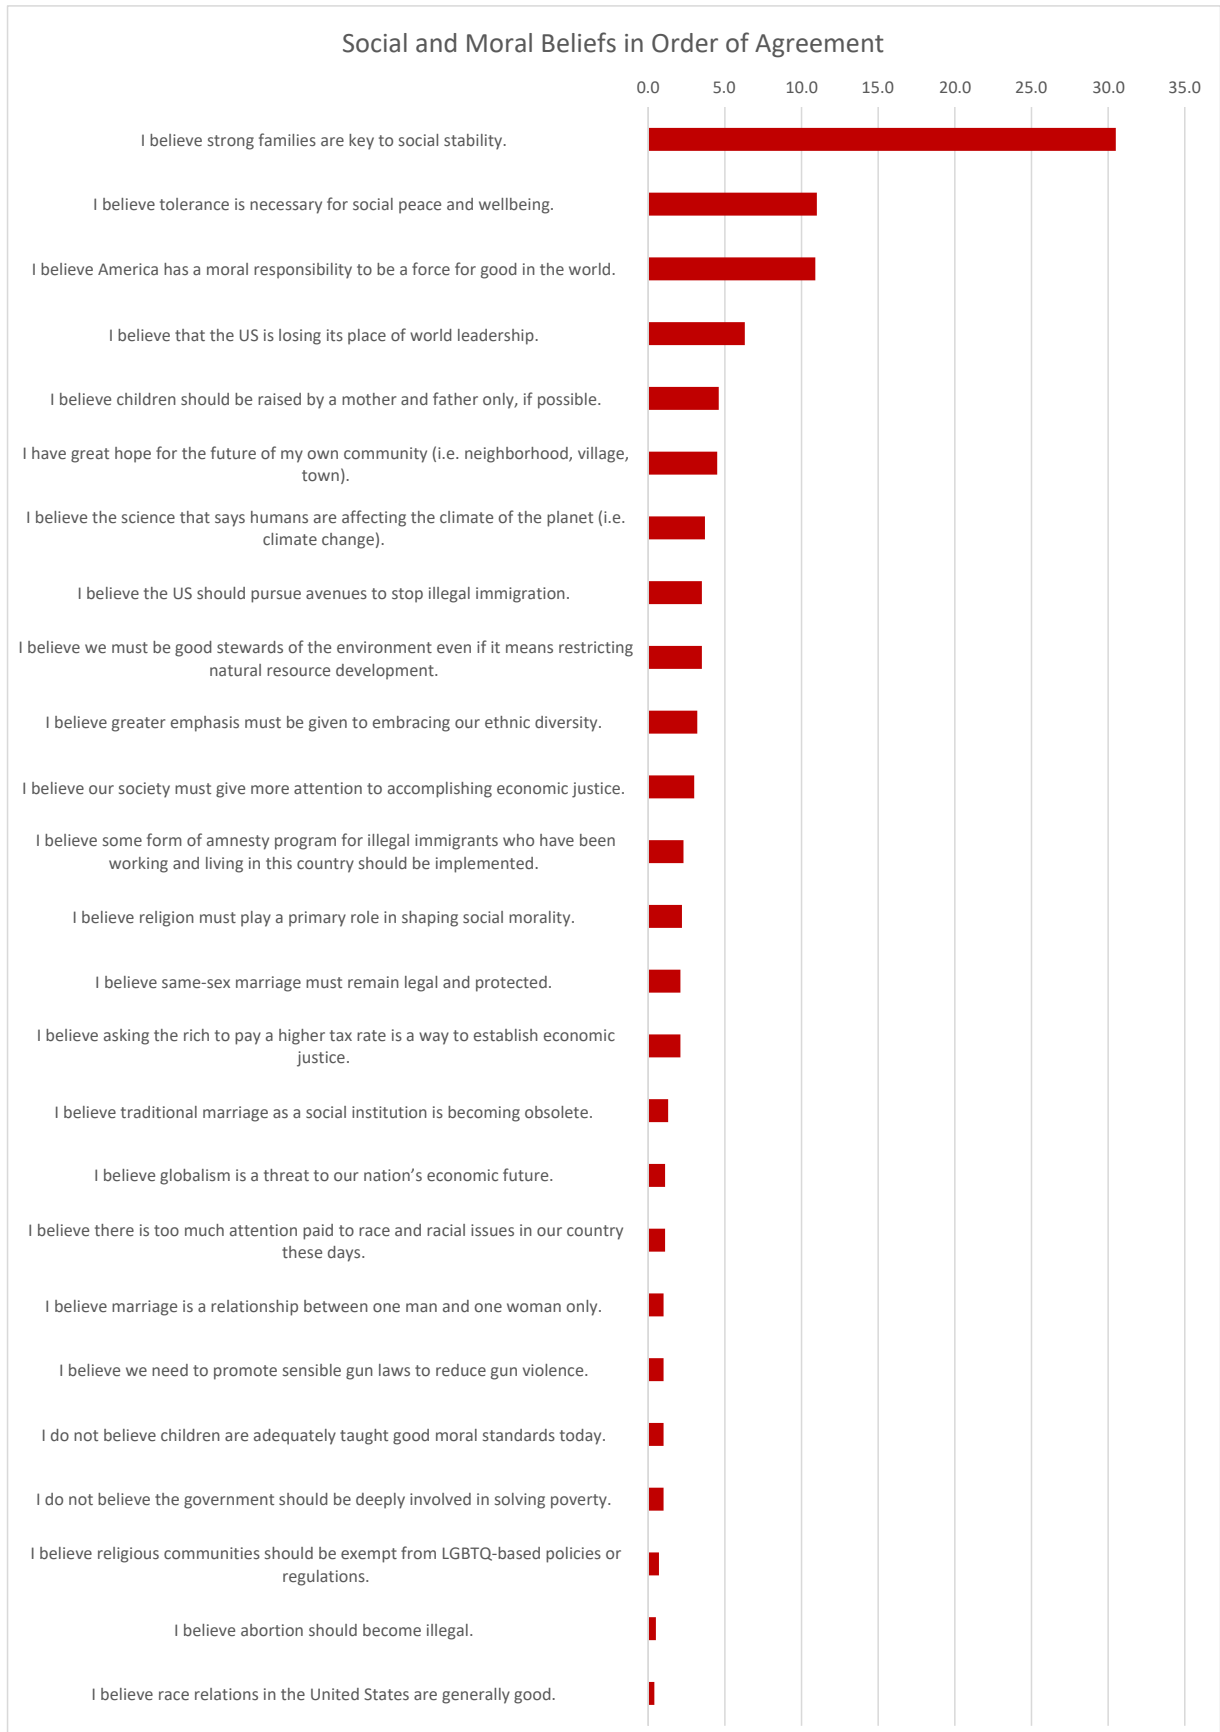

Hint: What does this graph show? It compares the change in agreement between the 2017 American Beliefs Study Survey and the 2021 American Beliefs Study Survey for this study area. (It is not a comparison to the national profile.) Look for significant swings in either direction.

Hint: Respondents were asked to indicate their religious preference, if any, for both 10 years ago and now. The report provides both data points plus a calculation of the change between the two points. If the point change column is red, fewer respondents preferred a particular tradition today than 10 years ago. If the point change column is black, more respondents embrace a religious preference more today than 10 years ago. This shows the trends below. This report also compares the study area to the national average responses. The Comparative Indexes reveal whether the study area averages are higher or lower than the national average.

Trends in Denominational Affiliation Compared to National Average

■ Study Area ■ US Average

Hint: Bars on the right indicate an estimated increase in denominational affiliation. Bars on the left indicate an estimated decline in denominational affiliation.

Note: A Covenant Order of Evangelical Presbyterians (ECO) is a new denomination that emerged since the 2012 survey. Any increase is due to the fact that they did not exist before.

Faith and Religious Involvement

Faith is a dynamic factor in many people’s lives. It grows and declines, and the level of active involvement changes as well. The Faith and Religious Involvement variables use several vantage points to provide an understanding of your study area’s faith and involvement.

Activity in a Religious Congregation or Community			
Study Area Compared to National Average			
	Study Area	US Average	Comparative Index
	<i>Involvement</i>		
	Projected percentage involved	41.7%	35.4%
Projected percentage NOT involved	58.3%	64.6%	90
Estimated change of those involved over prior 10 years (point change)	-9.0	-8.9	

Hint: This table presents the percentage of the population in the study area likely to either be involved or not be involved in a religious congregation or community. It also compares these two data points to the national average.

Also, consider the Estimated (point) Change over 10 years. This looks at how respondents answered the question about involvement both currently and 10 years ago. If this number is negative, it means it is likely that the level of involvement is declining in the study area. You can compare this to national changes.

	Study Area	US Average	Comparative Index
Directional Change in Involvement			
Percent likely to have become active	2.9%	3.8%	75
Percent likely to have ceased to be active	11.8%	12.7%	93
Percent likely to have made no change	85.3%	83.5%	102
Net Change in direction of activity	-9.0	-8.9	

Hint: This table reflects how respondents answered a question about activity in a religious congregation or community. If they were involved 10 years ago, but not today, this is reflected in the "Percently likely to have ceased to be active" column. If they were not active 10 years ago, but are now, this is reflected in the "Percent likely to have become active" column. The net change in direction of activity displays the direction the religious activity is moving. If the number is red, more individuals have stopped being active than have become active. You can also compare the study area to the national average.

Supporting Information

Interpreting the Report

The American Beliefs Study reports help you interpret data at a glance.

Comparative Indexes: All variables have a column called Comparative Index, which compares your study area with a larger area. For this report, all comparisons are with the national averages for the data item.

- Indexes of 100 mean the study area variable is the same as its base area.
- Indexes greater than 100 mean the study area variable is above the base area. The higher the number, the greater it is above the base.
- Indexes less than 100 mean the study area variable is below the base area. The lower the number, the greater it is below the base.

Color Coding: The Comparative Indexes columns are color coded so you can easily spot changes and the direction of change.

Index: Above Ave Ave Below Ave.
